

ASSESSMENT AND INTERNAL VERIFICATION FRONT SHEET (Individual Criteria)

(Note: This version is to be used for an assignment brief issued to students via Classter)

Course Title	Bachelor of Arts (Honours) in Graphic Design			Lecturer Name & Surname		Matthew Cumbo	
Unit Number & Title		CAWEB-506-1503 Introduction to Web Development					
Assignment Number, Title / Type		Time to Surf					
Date Set		17 th February 2026	Deadline Date	1. 10/04/26 2. 15/05/26 3. 29/05/26 4. 28/05/26			
Student Name			ID Number		Class / Group	GRD 5.1A, GRD 5.1B	

Assessment Criteria	Maximum Mark
KU1 Outline the key factors and constraints influencing the design of an effective web application.	10
KU2 Identify authoring tools and code frameworks used in the development of a web application	10
KU3 Identify accessibility solutions for the web application plan.	10
KU4 Record and rectify issues in code, abiding by a developed test strategy document and appropriate validation tools.	10
AA1 Construct a design document which includes a site map, wireframe and style guide.	10
AA2 Apply the latest HTML mark-up and CSS to the web application.	10
AA3 Apply accessibility principles to the web application.	10
AA4 Apply appropriate naming conventions to the resources used in the creation of a web application.	10
SE1 Develop functional and non-functional requirements for the web application.	10
SE2 Evaluate the results of the test carried out by presenting appropriate modification solutions.	10
Total Mark	100

Notes to Students:
- This assignment brief has been approved and released by the Internal Verifier through Classter. - Assessment marks and feedback by the lecturer will be available online via Classter (http://mcast.classter.com) following release by the Internal Verifier - Students submitting their assignment on Moodle/Turnitin will be requested to confirm online the following statements: Student's declaration prior to handing-in of assignment ❖ I certify that the work submitted for this assignment is my own and that I have read and understood the respective Plagiarism Policy Student's declaration on assessment special arrangements ❖ I certify that adequate support was given to me during the assignment through the Institute and/or the Inclusive Education Unit. ❖ I declare that I refused the special support offered by the Institute.

Purpose and Aims

This unit will provide the learner with the core technical knowledge needed to design and program a web application for a client such as a small business.

This unit will provide learners with the knowledge and practical experience they need to build and manage professional websites using the latest HTML and CSS mark-up, which can be implemented in future-rich web browsers on iPhones, Android Phones, and WebOS Phones, thereby allowing learners to design and build websites that surpass desktop equivalents.

Learners will begin by reviewing the key principles of good web design in relation to a number of objectives including market analysis and information architecture. Learners will then design a web application for use on a range of different platforms, which will require them to be confident in carrying out more advanced design techniques which addresses current accessibility guidelines. Using validation tools to test the web application, learners will then make recommendations for the future development of their product.

Learning Outcomes	
LO1	Explain the principles of good website planning including target market, website objectives, navigation solutions, site structure, user interface and viewing platforms.
LO2	Produce a design specification for a web application to a given brief.
LO3	Implement a web-standards compliant web application to a given brief.
LO4	Appropriately test and review a web application.

Scenario

You are to plan, design and develop a basic website related to a subject of your choice, showcasing a list of interesting aspects of that subject throughout the website. The **minimum requirements** are as follows:

The website should have a **homepage** to welcome the user, a page to show off a **list aspects of a subject** you are interested in, such as fictional characters, places you visited, favourite recipes, etc. Then the website must provide more detailed information in a **focus page** for each item in the list, including images, video, etc. It should also include a Top 3 page, showing off your absolute favourites from the list. Finally, it should also include a **contact form** which launches an email software with a prefilled message based on the submitted form.

P.S. You are **encouraged and expected** to **come up with other ideas** that you can add to your website to make it more interesting.

This process will start off with a **planning document**, leading into **development of the website** itself. Once done, this project will be passed on to someone else for testing. This website is to be **backed up via GitHub**, with regular updates being made throughout the development process of your website. The repository created for this project must be **public** and needs to be compliant with the rules for GitHub Pages to allow for public hosting of your website. This needs to be set up before Task 1 begins, as all work for this assignment will be submitted through this repository. This repository will then be **submitted via MS Teams**.

Task 1 – Planning Document

For the first task, you will be coming up with all the ideas and planning for your project. All the parts of this task must be submitted as a single PDF document.

Part 1 – Project Idea (SE1)

1. Explain what the website is about and what its purpose is
2. List all the different pages that you intend to have as part of your website, including all the functionality that will be built into these pages

Part 2 – Target Audience (KU1)

1. Develop 3 User Personas that represent the target audience of your website. Make sure to include all the relevant information
 - a. Must have information:
 - i. Basic personal information
 - ii. Why they want/need your website
 - iii. Frustrations with similar websites
 - iv. Difficulties/special needs that may need to be addressed

Part 3 – Design Planning (AA1)

Based on the User Personas developed in Part 2:

1. Produce a Sitemap, which will show the website's Navigational Structure
2. Compile a Style Guide (UI Kit) covering all the visual specifications of your work
 - a. Make sure to design as many components here as possible, even if they are not necessarily going to be used in your project
 - b. Make sure to have as much detail as possible about all the different aspects of the Style Guide so you can avoid making design decisions while coding
 - c. This should also include variations of these components, such as active and hover states
3. Plan out your web pages by constructing:
 - a. At least 2 low-fidelity wireframe for each unique page in your website
 - i. These wireframes should display different possibilities for the layout of the page in question
 - b. 1 medium-fidelity wireframe for each unique page in your website
 - i. This wireframe should be based on the low-fidelity wireframe that was deemed to be idea

Submission: One **PDF** document hosted in a **Public GitHub repository**

Grading Criteria: KU1, AA1, SE1

Deadline: 10th April 2026

Task 2 – Project Development

For this Task, you are to build your own website based on the planning outlined within your Planning Document.

Part 1 – Core Structure (AA2, AA4)

1. Build your website using appropriate HTML practices and HTML5 semantics to define the basic structure and functionality of your website pages.
2. Use CSS and CSS3 properties to style your web pages according to your defined style guide
3. Organise your project properly, including following proper naming conventions throughout your project.
4. Your code needs to be validated using the following validators:
 - a. HTML: <https://validator.w3.org/>
 - b. CSS: <https://jigsaw.w3.org/css-validator/>

Part 2 – Accessibility (KU2, AA3)

1. Use Bootstrap to set up your layout, making sure this results in a responsive layout.
2. Integrate Accessibility solutions into your design.
3. Include comments within your code to help explain what your code is doing.

NB: You can use the following links to refer to the different types of HTML elements and CSS properties that can be used:

- HTML: <https://www.tutorialrepublic.com/html-reference/html5-tags.php>
- CSS: <https://www.tutorialrepublic.com/css-reference/css3-properties.php>

Your website files must be synced with a **GitHub repository** and use **GitHub Pages as a host** when complete. Show continuous evidence of your output by uploading your pages regularly to the repository, including detailed descriptions with your Commits (this will also serve as a backup of your work).

Submission: Project files added to **same GitHub repository** as Task 1

Grading Criteria: KU2, AA2, AA3, AA4

Deadline: 15th May 2026

Task 3 – Evaluation & Testing

Once project development is complete, you will be given a classmate's project to evaluate. Based on the Planning Document and the website itself, you are to:

1. Create an IPO Chart for each web page based on the Wireframes presented in the Planning Document
2. Create Test Case tables for each web page in the project, based on the IPO Charts above, reporting what worked and what didn't
3. Check if the submitted codebase is valid using VS Code Extensions or online validators, and comment on your findings
4. Provide suggestions for further ideas that can be implemented to enhance the existing project

Submission: One **PDF** document hosted in a **Public GitHub repository**

Grading Criteria: KU4, SE2

Deadline: 29th May 2026

Task 4 – TCA

For this task, you will be given a quiz focusing on the theoretical part of this unit and will be taken via MS Teams.

Topics covered:

- Web Accessibility
- User Demographics
- User Experience
- User Personas

Sample Question:

Which POUR principle emphasizes ensuring that all users can see/hear the content of a website?

- a) *Perceivable*
- b) Operable
- c) Understandable
- d) Robust

Submission: TCA Quiz via MS Teams

TCA Date: 28th May 2026 (during lecture)

Grading Criteria: KU3

Minimum Evidence List

Your GitHub repository link must include:

1	T1: Planning document in PDF format via GitHub.	☐
2	T2: Project files via GitHub.	☐
3	T3: Testing document in PDF format via GitHub.	☐
4	T4: TCA results	☐

Print this page and hand in with your assignment on final hand in date.
